

Paul De Hert (1965) is an international expert with regard to e-justice, viz. issues related to justice and home affairs at the European (e-) level with an technological (electronic) (-e) component: biometrics, interoperability, international criminal records, Schengen, Prüm, availability, human rights and evidence and intelligence sharing. He is involved in national and international legal or multidisciplinary projects about issues such as ambient intelligence, identity, service platforms, profiling, data protection, intellectual property rights, e-publishing etc. In those projects, next to the more technical legal work he provides for, he adds fundamental insights with regards to participatory Technology Assessment (pTA), accountability and transparency, the singularity of legal regulation, human rights and human dignity.
